Tikit Printer Control Centre

The Tikit Printer Control Centre, part of Tikit House Style Manager, is an enterprise printer management solution developed by the Tikit Software Group. It enables firms to organise and maintain firm-wide printer settings from one user interface, meaning that new or amended printer settings can be created and deployed firm-wide without requiring any technical or development resource.

The need for an enterprise printer management solution

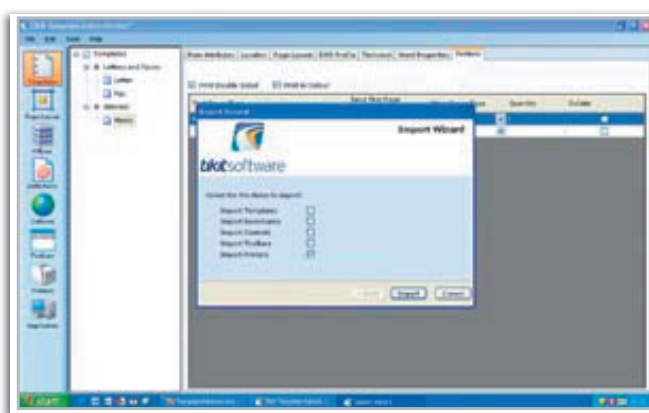

The intricate nature of a law firm's templates means that customised printer settings are often required, necessitating complex work arounds and coding. The end result of this is that the deployment and maintenance of a firm's printer is often complicated and time consuming.

Firm-wide benefits

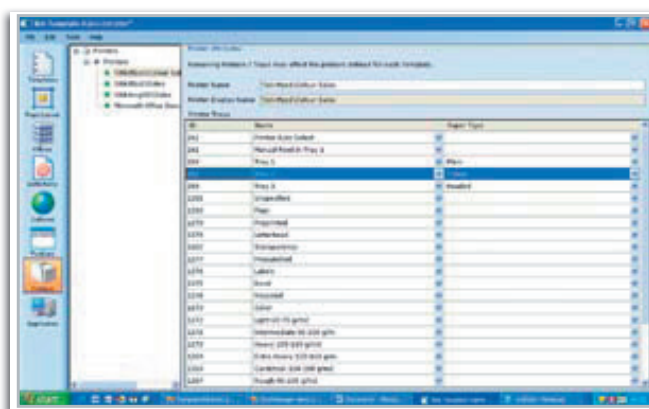

- A single front end for maintaining firm-wide printer settings
- End users presented with clearly defined and easily navigable printer settings
- Easy to use printer API wraps complex printing functions without the need for additional code

Specific features

- Import existing printers and printer trays into Tikit Printer Control Centre with the Import Wizard
- List physical printer tray names along with 'user-friendly' paper type names set by administrators
- List physical printers for use and assign trays to each printer
- Paper types can then be associated with trays

Easily import existing printers with the Import Wizard

Paper types can be associated with specific trays for each printer on your system
