

Security Management

iMPrivate

iMPrivate is a trustworthy ethical wall and security management tool for WorkSite, utilizing WorkSite's required three-tier architecture for maximum safety, functionality, and efficiency.

iMPrivate's key features:

- Identifies documents based on any combination of search criteria, including full text values
- Surgically adds, removes, or modifies security on specific documents only, without altering any other security settings
- Defines security sets within iMPrivate, or using any open data source, or CSV data
- Test run security sets to see what changes would be made, before you make them

- Processes all documents in one or more databases efficiently
- Restores archived documents to make security changes
- Records changes in the document history

The benefits to you:

- Improves performance of WorkSite servers
- Enforces consistent application of metadata/security policies
- Preserves audit trail – records changes in document history

iMPrivate will maintain security in WorkSite, especially in environments that are still using a WorkSite "classic" architecture. It is more than just an Ethical Wall utility – it provides day-to-day security maintenance for WorkSite.

DocAuto provides a comprehensive suite of software solutions for Autonomy iManage WorkSite that reduce risk, improve user experience, and optimize performance.
