

Security Management

Watchdog Server

This centralized and comprehensive solution reports on and takes action on all activity in WorkSite regardless of the source or type of operation. You can continuously monitor all activity directly in one or more WorkSite databases, and instantly notify specific users or groups about the activity, to maximize security, increase productivity, and efficiently respond to important WorkSite activity.

Watchdog Server's key features:

- Monitors 24 different WorkSite user operations in real-time including: Check In, Check Out, Create, Export, Delete, Print, View, E-Mail, Modify Security, etc.
- Monitors and reports on all activity, and can disable user accounts or initiate workflows to prevent content theft or other unauthorized activity
- Notifies specific users or groups instantly and automatically (i.e., attorneys can be informed of remarkable activity on their matters, or by users they manage)
- Disables user accounts automatically if activity exceeds preset thresholds
- Multiple monitoring uses: content theft, knowledge management, records management, etc.

- Customizes notification content to include very detailed event, user, and document-by-document information, including links to the affected documents in WorkSite if desired
- Generates notifications based on metadata filters to alert users of specific matter activity (i.e., collection notices, document creation by external users, security edits, copying of forms, etc.)
- Dynamically creates notification profiles or filters based on data pulled from one or more external ODBC-compliant data sources on-the-fly

The benefits to you:

- Protects company assets while monitoring WorkSite activity discreetly
- Reduces response time to events
- Improves client service via continuous activity monitoring and feedback

Monitoring and maintaining security across an entire organization can be extremely challenging. With Watchdog Server, you can prevent the theft of intellectual property, and receive instant notification of suspicious – or desired – user activity on an organizational level.

DocAuto provides a comprehensive suite of software solutions for Autonomy iManage WorkSite that reduce risk, improve user experience, and optimize performance.
