If you already have eBillingHub, you know it dramatically simplifies the e-billing process by generating e-bills in the proper format, validating them against corporate clients’ guidelines, submitting them to the appropriate legal spend management system, and tracking their status, all through a single portal. Tikit Carpe Diem is among the most widely used timekeeping solutions available, designed to address law firm challenges with inclusive timekeeping, expenses, and disbursement functionality and forecasting and workload management.

Now, Tikit Carpe Diem combined with eBillingHub further streamlines your billing process. Billing guidelines sourced directly from eBillingHub are used to validate time entries in Tikit Carpe Diem instead of later in the billing process.

By taking advantage of the integration between eBillingHub and Tikit Carpe Diem, you can move ahead to a more efficient and profitable future, confident that you are working with industry leaders in the fields of electronic billing and time entry for law firms.

With increasing pressure to streamline billing efficiencies and capture every single billable moment, firms must find any and all feasible ways to improve the workflow between lawyer and client. Electronic bills need to be more efficiently generated to shorten the bill-to-payment cycle, ease the burden on billing staff, and increase billing compliance. Now, eBillingHub® and Tikit have teamed up to help your firm meet these goals.
REAL-TIME COMPLIANCE, FEW REJECTIONS, FASTER PAYMENTS

Easy Steps for Tracking and Submitting Billable Time
The integration between Tikit Carpe Diem and eBillingHub provides lawyers with mobility so they can enter and validate time when they are out of the office. Tikit Carpe Diem can be downloaded to a favorite device or operating system, and opening and submitting a new timecard is done from the Tikit Carpe Diem application.

Streamline the Validation Process
The integration of Tikit Carpe Diem with eBillingHub puts the know-how where it belongs: on the fee earner. By enabling your lawyers to become part of the e-billing process, accounting and support staff no longer need to spend numerous hours problem solving.

Eliminate Costly Problem Solving by Finance Staff
With time cards entered by fee earners via their mobile devices and automatically validated against clients' billing guidelines sourced from eBillingHub, the result is fewer billing errors that lead to rejections. For the finance staff—those in areas such as accounting and support—the time spent fixing entries before and after they are rejected by clients is cut dramatically.

A Win-Win for Everyone
The entire firm benefits from the eBillingHub and Tikit Carpe Diem integration with a better and more effective prebill review process, more accurate time entry, increased accuracy at the moment of billing, and faster approval and payment processing. Accounting and finance staff experience time savings and increased efficiencies, clients are satisfied with more accurate bills, and your firm speeds up time to payment as a result.
